

After many months of R&D @ MPC and Lotus Esprit Australia is proudly to announce the release of the full stainless steel sports exhaust system (Mark I) available in Australia.

The exhaust is a 2.75"inch tig welding construction made from a 304 stainless steel material weighing at 8 kilos and producing up to 25 extra horsepower at the rear wheels as tested on a factory Esprit S4. (Test results are available on www.lotusesprit.com.au)

Available in fully 'Mirror' Polished if requested, including pipework, box and Slash Cut Tailpipe

The sports a cat pipe replaces the stock factory cat, and cleans the emissions while permitting a significant power increase - without any technical or legal issues. Once fitted, no modifications will be required to the engine management system. This Cat pipe will fit all variants of the Esprit Turbo. The cat itself is a 200 cell metal substrate unit weighing just 2.8 kilos.

The full system is a straight bolt on configuration for the 2.2 litre Engine (Stevens design) Turbo Vehicles. This upgrade will delete the [Exhaust Back Pressure Valve](#) from the system. (No spacer is required).

WEIGHT COMPARISON

	LOTUS FACTORY	MPC MARK I UPGRADE
Original Cat	5.0 kilos	2.8 kilos
Original Exhaust	13.5 kilos	8.0 kilos
